

# **Bennett Sheepskin Pipe bag**

Bennett Sheepskin Pipe bags are made of the finest quality skins available. We have worked closely with our tanner for a number of years to get them to the highest level of tonal quality, absorption of moisture and lifespan of bag.

Our sheep skin bag appearance may differ from other sheepskins on the market, or to that which you have played in the past. Our bags have a coarser finish. This is due to the fact that during the final stages of the skin being prepared, other tanners choose to “buff” the skin to make it more pleasing on the eye, this is purely for cosmetic purposes.

We at Bennett Pipe Bags refuse to do this as it compromises the thickness and therefore the quality of the skin. The “buffing” process removes the fatty layer on the outer side of the bag which we have experimented with over the years and discovered that this layer enhances the quality of sound and resonance. It allows the bag to absorb more moisture and ultimately adds to the longevity of your bag.
